B.Tech, Computer Science and Engineering

Address : Rain Tree Dwaraka Krishna, Willows 703 Opp. Acharya Nagarjuna University (ANU)

Summary

DevOps & Cloud Engineer with **2 years** of experience automating **AWS infrastructure, CI/CD pipelines**, and data platforms using **Terraform, AWS CDK, GitLab CI/CD**, and **Databricks**. Reduced deployment time by **83%** and built self-healing **cloud workflows** for automated failure recovery. Experienced in **Infrastructure as Code, cloud automation, observability**, and **scalable data engineering**.

Experience

Data Saints

Jun 2024 - Feb 2026

DevOps Engineer · Cloud Architect · Full Time

Remote

- Automated application and infrastructure deployments using Python and GitLab CI/CD, **reducing deployment time by ~83% (from ~30 minutes to ~5 minutes)** and minimizing repetitive manual steps.
- Managed Terraform-based infrastructure across **4 AWS environments (Dev, DevQC, Stage, Prod)**, ensuring consistent Infrastructure as Code deployments throughout the release lifecycle.
- Engineered AWS Lambda-based self-healing workflows for DMS replication failures, **automating recovery from recurring incidents** and escalating unresolved failures through real-time alerts for manual intervention.
- Managed **4 corresponding Databricks environments** and developed Delta Live Tables (DLT) pipelines to support environment-isolated data processing and deployment workflows.

May 2025 - Jul 2025

Research Intern · Intern · Internship

Hybrid

- Built a **PX4-Gazebo UAV simulation platform supporting 3 flight-control modes — manual, autonomous, and voice-controlled** — using ROS 2, MAVSDK, Python, and QGroundControl.
- Integrated **5+ robotics and simulation technologies — PX4, Gazebo, ROS 2, MAVSDK, and QGroundControl** — into an end-to-end UAV simulation and control environment.
- Enabled **cost-effective and risk-free virtual flight testing**, allowing autonomous control logic and flight scenarios to be tested and iterated without relying on physical drones, reducing hardware usage and the risk of costly equipment damage.

Projects

Enterprise PostgreSQL Data Lake Ingestion Pipeline

Sep 2025 - Dec 2025

Data Saints · AWS DMS, Amazon S3, AWS CDK, Terraform, PostgreSQL, Python, AWS IAM, CloudWatch, SNS, Git, GitLab CI/CD

Data Engineering

- Engineered a production **PostgreSQL-to-Amazon S3 ingestion pipeline using AWS DMS**, enabling continuous replication for downstream data lake and analytics workloads.
- Automated infrastructure provisioning and deployments across **Dev, DevQC, Stage, and Prod** using AWS CDK (Python) and Terraform, eliminating repetitive manual environment provisioning.
- Implemented automated DMS failure recovery using **AWS Lambda, CloudWatch, and SNS**, automatically remediating **~70% of recurring failure scenarios** while escalating unresolved incidents for manual intervention.

GitOps-Driven CI/CD Platform (Single-Account Enterprise Pattern) | [Link](#)

Nov 2025 - Dec 2025

Personal · HCL, Python

DevOps

- Architected a **GitOps-driven CI/CD platform using AWS CodePipeline, CodeBuild, Terraform, and GitHub**, automating infrastructure deployments from source-code changes through production.
- Implemented a controlled **Dev -> Manual Approval -> Prod** promotion workflow with automated Terraform plan/apply stages, reducing repetitive manual deployment operations.
- Reduced active deployment effort by ~70%** by automating infrastructure validation, Terraform execution, and environment promotion, while retaining manual approval gates for production releases.

- Engineered an **autonomous cloud operations platform using AWS Lambda, EventBridge, CloudWatch, AWS Config, and Terraform** to detect infrastructure failures, configuration drift, and compliance violations.
- Developed event-driven **self-healing workflows** to automatically detect and remediate predefined infrastructure issues, reducing **manual remediation effort by ~60%** for supported failure scenarios.
- Implemented automated **compliance monitoring, cost-anomaly detection, and SNS/SES alerting**, enabling proactive issue detection and escalation of incidents requiring manual intervention.

- Developed a **Zero-Knowledge Proof (ZKP) income verification platform using Circom, Groth16, Rust, and AWS**, enabling users to prove salary eligibility without revealing their actual income.
- Designed a privacy-preserving verification workflow that **eliminated 100% of raw income disclosure to the verifier**, validating eligibility through cryptographic proofs instead of exposing sensitive financial data.
- Integrated **AWS and DynamoDB** to persist only cryptographic proof hashes, ensuring **zero raw salary data was stored** during the verification process and minimizing sensitive-data exposure.

Certifications

AWS Certified Developer – Associate Verify AWS Training and Certification · 314cb77e15df4cda8f33208d4e0b8d1c	Mar 2026 - Mar 2029
Microsoft Certified: Azure Developer Associate Verify Microsoft · BE572E-971E9C	Apr 2026 - Apr 2027
HashiCorp Certified: Terraform Associate (004) verify HashiCorp · 42f5f2da-4243-4df7-8b51-752b24410ed5	Apr 2026 - Apr 2028
Red Hat Certified Developer in Cloud-native Applications Verify Red Hat · 260-059-381	May 2026 - May 2029
Oracle Certified Professional: Java SE 17 Developer Verify Oracle · 327225862OCPJSE17	Mar 2026

Skills

Programming Languages: Python, C++, C, SQL
Tools and Technologies: AWS, Terraform, JFrog Artifactory, Docker, Kubernetes, Databricks, AWS QuickSight, Microsoft Power BI, Azure, PostgreSQL, AWS CDK, CloudFormation, GitLab CI/CD, ROS2
Design and Simulation Tools: Splunk, Grafana, Prometheus, CloudWatch, PX4, Gazebo, MAVSDK
Technical Skills: DevOps, Unix / Linux, Git, CI/CD, Cloud & Data Engineer, Cloud Architect, Infrastructure as Code (IaC)
